

JSON in C# Example

Paulo Vieira

2020

Purpose

1. Serialize a customer;
2. Deserialize customers from a customer.json file;

Commands

- Add Package

```
dotnet add package Newtonsoft.Json
```

- Include the namespace

```
using Newtonsoft.Json;
```

Code

```
string jsonCustomer =  
JsonConvert.SerializeObject(customerToSerialize, Formatting.Indented);  
  
List<Customer> customers =  
JsonConvert.DeserializeObject<List<Customer>>(jsonstring);
```
